Sidney maximizes his education by attending NACTEC Summer Sessions: Field Biology (2010), NCCER Carpentry I (2010) and NCCER Core (2009)*. As a result of his construction trainings at NACTEC, Sidney secured employment with the Youth Restoration Corps. in 2010. Following his NACTEC training, Sidney and his co-workers built a safety cabin on the Iditarod Trail between Unalakleet and Shaktoolik that mushers will use for decades to come as they need shelter. NACTEC works with many different organizations in the region and the state to maximize student connections. Transitions from school to the workforce are strengthened by job shadowing and apprenticeships.

*Funding provided by the Alaska Construction Academies, Alaska Department of Labor and Workforce Development and Denali Commission supported this training.
